Figure 10

Figure 1 consists of four scanning electron micrographs (A, B, C, D) arranged in a 2x2 grid, showing the surface morphology of polyimide films after annealing at 100°C for different durations. Panel A (top-left) shows a relatively smooth surface with some fine, wavy lines. Panel B (top-right) shows more pronounced, parallel ridges and grooves. Panel C (bottom-left) shows a highly textured surface with many fine, intersecting lines. Panel D (bottom-right) shows a very rough, fibrillar surface with many small, rounded protrusions. The labels A, B, C, and D are in the bottom-left corner of each panel.
